

# Glamorous rocks

Alberta

## Introduction

Welcome to the most interesting information text you will find about rocks! did you know that rocks were formed in 4000 years

### **Rocks are exciting and will make your day.**

However, some people find it boring.

Geologists study rocks so come and study rocks with us

### **Igneous Rocks**

Igneous rocks are made from magma when it cools down. Igneous rocks can be helpful and useful for building houses. We can use igneous rocks for building because it is so strong. They can be found in caves or mysterious places, like near volcanoes. Igneous rocks can be smooth if they cool down quickly or it can be hard when it cools down slowly.

### **Metamorphic rocks**

Metamorphic rocks are formed when heat or pressure is applied. Metamorphic rocks like marble and slate are amazing rocks that have changes from their original rocks. In fact, the word metamorphic means change. Metamorphic rocks come from igneous and sedimentary rocks that have gone through change. They can be used for buildings and sculptures.

### **Sedimentary rocks**

Sedimentary rocks can be formed near seas, lakes, oceans or rivers. They are formed in layers when little bits of rocks build up over time. They can have fossils in them.
